---

Dear Royal Club Klang,

Fiber Optics Are Weather Safe – Because it's not electricity being sent through the wiring, changes in weather cannot **affect** the signals or information being transmitted. Rain, cold, **lightning**, all of these **can affect** traditional electrical signals but not **fiber optics**

Lighting cannot **go through fiber optic**, but **can** still **go through** power cable and network cable or direct **lightning strike on** the devices.

To minimize the lighting strike, earthing will be installed from the controller to ground.

Thank you

Sincerely,

Ruben
